Summary

I am a current Computer Science Masters with a bachelor's in chemical engineering. Most recently working as an AR/VR Researcher and IT Assistant on campus. My area of expertise is Programming, Software Development, Spatial development, Engineering and Design. I am seeking a Software Developer Internship role for the Summer 2024 to develop and contribute my skills in a dynamic environment.

Professional Experience

AR/VR Software Researcher **CSUDH Research** **Sep 2023–Present**

(Documentation), **Skills:** C#, SQL, Systems Design, XR, Cloud, Prototype. **Tools:** AzureSQL, Unity3D, XCode, IoT Sensors

- Building an Extended Reality campus map software that allows users to view live sensor data (temperature, humidity, people occupancy) through XR Meta Quest devices. This provides spatial experience for user to interact and view campus sensor data.
- Architecture the entire framework application. This includes from designing of the 3D Campus Model to efficiently storing telemetry sensor data in Azure SQL database for integrating data flow to stream in the XR application.

IT Student Assistant **IT Division - CSUDH** **Mar 2022–Present**

Learning Spaces team (www.csudh.edu/it/) and **Skills:** Technology solutions, Software, Hardware Design and Networking, Firmware

- Boosting classroom system uptime by setting up and configuring new hardware (PC, projector, monitor), reimaging Microsoft Windows, and maintaining inventory records of classroom IT equipment thus reducing class disruptions due to IT issues
- Improving call resolution rates by assisting faculty and students in troubleshooting login issues, duo authentication, campus portal

Field Engineer **QAPCO (LDPE Plant)** **Sep 2020–Sep 2021**

Utilities team (www.qapco.com) and **Skills:** Troubleshoot, Ethics, Safety Practices, Documentation, Engineering, Cross-Functional teams

- Utilized the PLC panel to diagnose startup and shutdown issues of equipment, minimizing downtime by 50%
- Prepared technical documentation which outlined various industrial systems operation, thus reduced field operation errors

AR/VR Student Researcher **AMIRA Research – TAMU-Q** **Sep 2018–Dec 2020**

Publication: (IEEE Publication) & (OAK Trust) and **Skills:** C#, Game Design, Unity Development, 3D models, Visual Scripting, User Testing

- Built Mixed Reality desalination plant software that train students to build the water treatment process and safety scenarios scenes that provide immersive selection of safety tools
- Design the application with Unity Game Engine, programmed, and animated with visual and C# Scripting
- Tested the MR application with 15 students on Microsoft HoloLens HMD, capturing user's learning feedback on the MR application's interactivity and visualization, results were published in two research journals.

Education

Master of Science in Computer Science **Dec 2024**

California State University, Dominguez Hills, Carson CA *GPA: 3.8*

Coursework: Data Structures and Algorithms, Operating Systems, Programming Languages Software Engineering Process, OOP Analysis

Clubs and Organization: AR/VR Club (President), IBM Z Systems (Student Ambassador), MSU (Facilities Advisor)

Bachelor of Science in Chemical Engineering **July 2020**

Texas A&M University, College Station TX

Software Projects (GitHub: https://github.com/ZaidKamil1574)

XR Campus Map Application: Developed spatial campus map software app for users to view live sensor data |Utilized: Unity, AzureSQL
MR Desalination Plant: Developed AR/VR application to train students the water treatment process |Utilized: Unity, HoloLens, C#
Campus Dining Application: Designed a prototype system to streamline meal ordering to cater student's specific dietary needs. (live website: https://dailyzglass.my.canva.site/csudh-campus). Utilized: HTML, CSS, Canva, ArgoUML. UI/UX Design, Architecture diagrams
Computer Vision: Utilized C++ and python via for Face Detection, Object Detection, and facial recognition in trained images
Weather Application : Developed an interactive weather application to iOS platform using Storyboard and SwiftUI programming.
AR Earth and Food Menu App: Developed an Earth AR a simple AR food menu app using 3D UI components application to Apple iOS
IoT Sensor Network: Use of three algorithms to determine the best path of Robot from start to target node. Utilized: Python, MARL
AI Chatbot: Build a simple AI prompt chatbot using LLM API | Utilized: Voiceflow, cody, Chatbase
Portfolio Website: Built a website which showcase my experience, projects and skills (website: mzaidk.net) | Utilized: Canva, CSS, HTML
Deep Learning: Utilized TensorFlow and Matlab for Classification of Images, feature extraction, and incorporating new data sets

Skills

Soft Skills: Detail-oriented, Safety, Presentation, Business integrity. **Technical Skills:** Game Design, Unity, AR, XR, VR, Project Management, Debugging, Mobile App Development, Product Development, Reverse Engineering, UI/UX
Programming: C, C++, Python, Java, Go, CSS. **Tools:** MS Office, Windows, Linux, ReactNative, Node.js, Wireshark, Chroma

Certifications

LinkedIn: iOS 15 Development Training, AR Development Techniques. **IBM:** IBM Z Xplore – Concepts.
CSUDH: Cyber Security Fundamentals Certificate
